

Astronomical Societies around the world have been celebrating the 400th anniversary of Galileo's pointing his telescope to the sky, forever changing our view of the Cosmos.

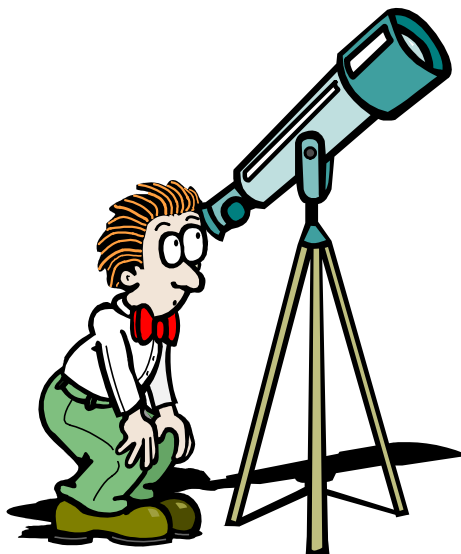

The Royal Astronomical Society of Canada, Victoria Centre, are hosting two IYA2009 events at **CATTLE POINT** and invite you to share with them a Galileo Moment of Discovery.

November 28th, 6:30 pm - a replica of Galileo's scope will be available to view the moon as Galileo saw it 400 years ago.

December 4th, 6:30 pm - enjoy the splendours of the winter sky.

Both dates are weather permitting.
